DETAILED ACTION

Allowable Subject Matter

1. Claims 3-15, 26, 31-35, 45, 47, 53, 55-68, and 71-74 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Gennaro teaches authenticating a data stream before the entire file is received. Gennaro teaches a progression of check values. Gennaro teaches a root check value.

Fraser teaches encryption and decryption of streaming data.

Schneier teaches the N-hash function which generates check values being derived from at least one other check value in a progression.

Gennaro, Fraser, and Schneier, alone or in combination do not teach:

A hashing a combination of the first hash value and a first verification value to obtain a second verification value, wherein the first verification value is derived, at least in part from a hashed portion of the data block and a third verification value.

A hashing a combination of the second hash value and a third verification value to obtain a fourth verification value wherein the third verification value is derived at least in part from the second verification value.

A first input derived in part from a third portion of block content.

Obtaining a second calculated check value by performing the predefined operation on a combination of (i) a value derived from the second block of data, and (ii) the fourth check value.

Art Unit: 2134

Inserting error-check values into the block of data, each error-check value being inserted in proximity to a portion of the block of data to which it corresponds, and each error-check value being operable to facilitate authentication of a portion of the block of data and of a check value in the progression of check values.
